

School Manager

Content filtering that minimizes workload and maximizes compliance

School Manager is a student-safety focused web filter that enables IT to create a low-maintenance filter workflow.

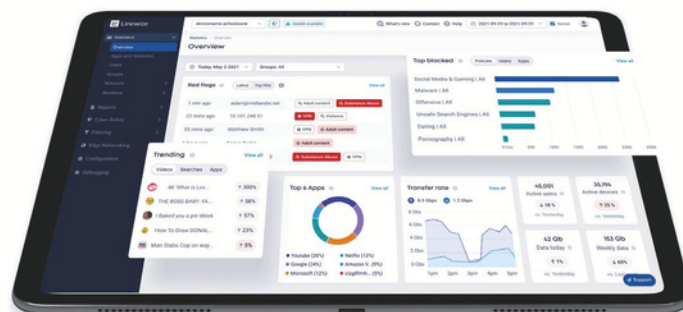

As network admins in the K-12 industry, you wear many hats. School Manager is built to address your challenges.

How School Manager helps IT administrators:

- ✓ Flexible custom filtering rules help minimize staff requests for filter adjustments.
- ✓ Offers quick hybrid deployment options for hardware and cloud.
- ✓ Eliminates the need to assess hundreds of CDNs that a single website opens.
- ✓ Quickly generates detailed student activity reports.
- ✓ Maintains compliance on Windows, Chromebook, Mac, and iOS—on any network.

The result?

Students stay safe online, teachers maintain control over their class without compromising compliance, and the network performs at an enterprise level.

Reduce the workload for admins with user-friendly reporting options.

School Manager features

School Manager is designed to reduce administrative workload.

Your web filter shouldn't limit learning in the classroom. **It should enhance it.**

Sophisticated alert systems

Receive cyber-safety and self-harm reports directly in your inbox (without worrying about being inundated with false positives).

Reports and alerts for student wellbeing

Create, generate, and schedule tailored reports for school faculty; reports can be as advanced and detailed or condensed and simple as you need.

Flexible deployment options

Hybrid hardware + cloud and/or full cloud deployment — yes, you can have both.

Native directory integration: works with G Suite, Azure, Localized AD, LDAP.

Versatile rule-setting

Create comprehensive rules with ease using "Signatures" and "Categories" to group types of sites together.

Limit access to Google

Enable rules to separate users' access to school-provided and personal Google accounts.

Reduce filter fixing

Powerful rule-setting makes hands-off filter management possible; decide which rules are locked-in school-wide and which rules can be toggled on and off by certain users.

User-friendly dashboard

User interface boasts easily digestible graphs and organized data; quickly view most blocked apps and sites, emerging trends in user activity, bandwidth utilization, red flag data, and more.

Maintain compliance

Lock in compliance with CIPA, COPPA, FERPA, and ATLAS.

Robust VPN insight

Schools commonly deal with students attempting to circumvent the filter. VPN search attempts are logged as a "Red Flag," and reports can be filtered by Red Flag types such as "VPN."

SSL inspection and decryption

Filters SSL sites off-network with the option of deep packet inspection on Windows, Mac, and iOS.

Sync with local and/or cloud-based directory services

Integrates with your Wi-Fi network and domain controllers, and connects to your local and cloud directory service.

Google and social media controls

Our "Content Modifications" feature allows admin to eliminate distractions (such as comments and "Related" content sections) on sites like YouTube, Google, Twitter, and Instagram.

Bandwidth-conscious schools can also limit video-streaming quality.

About Linewize

The Linewize ecosystem is a unique response to the challenge of today's connected learning environments. We align a series of products to help districts stay in regulatory compliance, get the most out of their purchased technology, keep kids cyber-safe at school, and impact your parent community by assisting them in raising good digital citizens.
