Student Safety Audit
What risks are most prevalent in your district?

According to the National Institute of Mental Health, suicide is the 2nd highest cause of death amongst 10-34-year-olds. With rates at their highest level, we want to help school district partners analyze the percentage of students who may be at-risk or show early signs of vulnerability.

Because of this, Linewize is offering a no-cost Student Safety Audit for all US schools and districts.

With a Linewize Student Safety Audit, you will be alerted to students who may be at risk now, and will gain access to risk profiles, and receive recommendations for implementing a holistic student safety program.

Starting A Student Safety Audit
How does it work?

Over a 30-day period, we will assess your students' online behavior for risks and alert you by phone to any students we believe are in danger.

Linewize Monitor does not bombard districts with alerts or false positives. Our artificial intelligence (AI) and team of highly-trained human moderators remove false positives and alert you only to those students who need your attention.

Using data analyzed throughout the Student Safety Audit, we'll produce a detailed analysis that shows other risks present across your district, including

- School violence
- Cyber or physical bullying
- Inappropriate relationships with an adult
- Self-harm/suicide/depression
- Drug use/addiction
- Sexual content
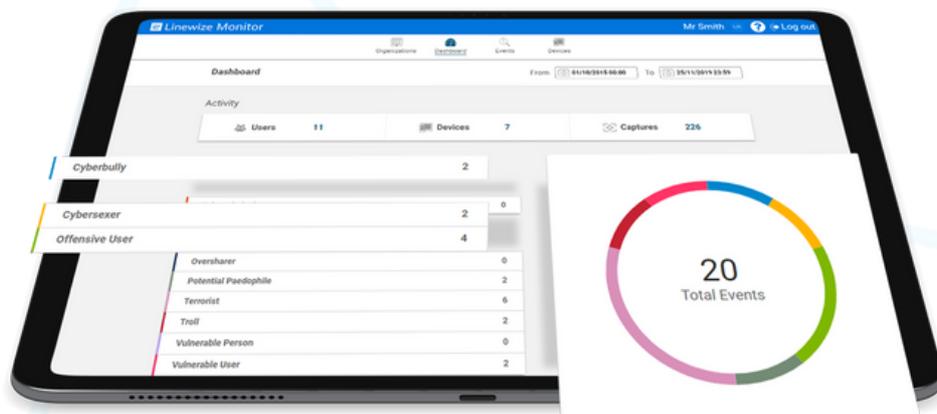

This is vital intelligence that can be used to better inform your student safety policies, as well as help you better target your digital safety education programs.
